

NutraComplete

World's Best Supplement?

Helps improve
age-related
memory loss!

Supplement Facts

Serving size: 3 capsules
Servings per container 90

Amount per serving	%Daily Value
MSM (Methylsulfonylmethane)	1,300mg *
Aloe (Inner Leaf Powder)	300mg *
Rhodiola Rosea Root Extract	100mg *
Ionic Trace Mineral Complex	600mcg *

*Daily Value not established

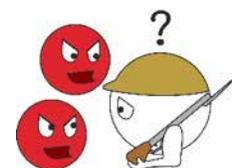

Other ingredients: Gelatin (capsule)

90 Servings 270 capsules

Many products give you only 30 servings. We save costs by packing 90 servings into one bottle. This allows us to give you better ingredients, and lots of them. It also ensures the customer takes it long enough to see results.

Immune System Modulator

Your immune system uses the acemannan in stabilized aloe to help identify friend or foe. Without this, your immune system may fail to identify cancer cells, or mistakenly attack healthy cells. Acemannan modulates the immune system, meaning a weak system is boosted, while an over-active one causing an autoimmune condition is down regulated.

Your immune system uses the acemannan to help identify which cells to attack.

New Discovery from an Ancient Plant

The science of Glycobiology reveals that the acemannan in fresh aloe can dramatically restore your health, including age-related memory loss. Called glyconutrients, they are unique carbohydrates found in many medicinal plants. They are especially abundant in fresh aloe, but a destructive enzyme released by the plant shortly after harvesting quickly dissolves the acemannan. Using our unique process, we remove the destructive enzyme to “stabilize” the acemannan, then freeze-dry the juice into a concentrated powder. Now, for the first time in history, people can get enough acemannan to dramatically restore their health and memory!

If the label doesn't say “stabilized” aloe, it has no acemannan!

4 POWERFUL INGREDIENTS!

1. Stabilized Aloe Concentrate

Far more powerful than regular aloe because of a special process that retains acemannan, the natural health factor in fresh aloe. Acemannan is a powerful antioxidant, an immune system booster, and a key nutrient for memory and over-all brain health. Experts in Glycobiology believe acemannan to be the greatest health discovery in history – the key to a long, healthy life.

2. Plant-derived Trace Minerals

Over 72 trace minerals are extracted from ancient plant deposits called humic shale. Unlike other minerals, these trace minerals are easily absorbed because the plant “pre-digested” them into very small ionic size. You need trace minerals to utilize vitamins, produce hormones and many other functions. Chickens fed these minerals produce twice as many eggs, and cows give 30% more milk. Due to depleted soils, everyone can benefit from these minerals.

3. MSM

Called the “miracle” supplement because of its many benefits, this natural sulfur helps promote healthy joints, hair, skin and nails. You'll look and feel years younger!

4. Rhodiola

An adaptogen herb used for centuries to help boost energy and reduce stress. Russian athletes and cosmonauts have secretly enjoyed the benefits of rhodiola for years, now you can too!

Plant-derived ionic Minerals

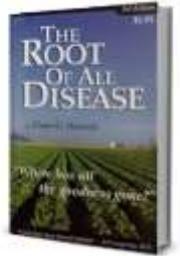

These minerals are in **NutraComplete**

The Missing Link in Nutrition

At one time, the Earth was covered in lush plant life growing in soil heavy with trace minerals from volcanic activity. Over millions of years, those mineral-rich plants died and compacted into layers of sediment called humic shale. Today we can extract the ionic trace minerals from those ancient plant deposits and concentrate them in nutritional supplements such as **NutraComplete**.

Root of all disease

Think of a disease, and most likely the cause is diet related. Our modern “factory” farmed food doesn’t have the nutrients it once had, especially minerals. The only solution is to take supplements, but not just any supplements. We need natural, plant-derived minerals found in products such as **NutraComplete**. Only these minerals contain the full spectrum of ionic trace minerals (over 70) along with the all-important fulvic acid complex found only in plant-derived minerals.

Plant-derived minerals are *naturally* better

Healthy soil contains microbes that live off decaying plant matter. These microbes excrete fulvic acid that dissolves the minerals so they can be taken into the plant through the root system. Plant minerals are submicroscopic ions, and because the plant “pre-digested” them, they are water-soluble making them far more bioavailable than minerals (rocks) found in ordinary supplements.

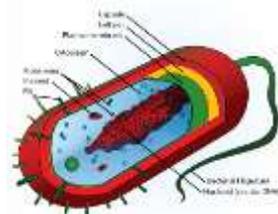

Ordinary supplements have poorly digestible minerals, and no fulvic acid complex.

Nature intended us to get our minerals from eating plants, or the animals that ate those plants. All other forms of minerals lack important co-factors such as fulvic acid. Their large particles are not easily digested and most pass right through without being absorbed. Even organic foods and supplements are deficient because the soils in which they are grown are mineral depleted. Look for “plant-derived” minerals on the label.

Nutrients in, toxins out

As we age, cell walls become thicker and less permeable keeping essential nutrients from entering the cell. Plant-derived minerals and their fulvic acid complex restores permeability to the cell allowing better absorption of nutrients and removal of toxins.

Your poor health could be caused by a lifetime of mineral deficiency. The plant minerals in **NutraComplete** help the other nutrients such as the stabilized aloe enter the cell. This is why it can help reverse aging and restore health unlike any other nutritional supplement.

Super Animals

Poultry that are fed plant-derived minerals lay eggs six months longer, grow faster, and are healthier on this new super-food. When given a choice, cows will always choose the hay that was grown on soil enriched with plant-derived fulvic minerals. They have less illness, produce more milk and have healthier calves. Imagine how much healthier *your* pet would be with these minerals mixed into their food every other day!

Caution: do not take NutraComplete with city tap water!

City water is disinfected with chlorine that is non-compatible with the fulvic acid in the minerals of **NutraComplete**. All water taken from the ground, river or lakes naturally has fulvic acid, so city engineers must remove it before adding the chlorine. Take **NutraComplete** only with bottled water, (distilled is best) as it usually has no chlorine bleach.
