

Healthier Teeth and Gums *just got easy!*

Bacteria can infect the inside of your teeth, the root canal and capillaries. "Swishing" nightly with ionic silver water helps flush out these bacteria.

Keep the bottle in your bathroom

All night, trillions of silver ions go to work!

Swish nightly with silver water

After brushing your teeth, put a capful in your mouth and swish for 30 seconds, and swallow. **Do not rinse**

ionic Silver is Better than Colloidal Silver

10ppm ionic

Our silver water has trillions of natural, microscopic ions which are easily absorbed.

500ppm colloidal

Colloidal silver has un-naturally large particles which are not accepted into the cell.

Safety: Unlike silver colloids, silver ions are the natural form of this trace mineral we get from our food. They are very safe, and no matter how much you take, do not accumulate in the skin causing argyria, a darkening of the skin.

Silver, safe and effective in modern products

Cutting boards infused with silver ions reduce bacteria.

Fabric infused with silver ions reduce odor.

We do not sell these products.

Note: Always use silver water full-strength, never diluted.
